WHAT THIS SYSTEM DOES

A fully autonomous multi-agent trading system that monitors markets, filters economic news in real time, picks the highest-probability strategy per instrument, enforces all prop firm rules before each trade, executes on TradeLocker DEMO accounts via MCP, and logs every trade to a structured journal with equity graphs and Telegram alerts.

DEMO FIRST

MCP INTEGRATED

1-5MIN SCALPING

PROP FIRM RULES ENFORCED

AI DECISION ENGINE

SYSTEM LAYERS

- Layer 1 — Data (MCP Sources)**

News feeds, TradingView alerts, TradeLocker market data, prop firm rules KB, Google Drive journal.
- Layer 2 — Agents (Decision Making)**

8 specialized AI agents: news filtering, scanning, strategy picking, risk guarding, execution, journaling, forecasting, orchestration.
- Layer 3 — Execution (TradeLocker DEMO)**

All trades placed on demo accounts. Prop firm rules enforced before every single trade.
- Layer 4 — Records (Drive + PostgreSQL)**

Every trade logged with full context. Equity curve graphs. Daily Telegram summary.

SYSTEM ARCHITECTURE — HIGH LEVEL FLOW

TECH STACK

LAYER	TECHNOLOGY	PURPOSE	STATUS
Orchestration	Python + LangGraph / CrewAI	Agent coordination & state management	BUILD
MCP Protocol	Anthropic MCP SDK (Python)	All 3rd party connections	BUILD
LLM Brain	Claude claude-sonnet-4-20250514 API	Agent reasoning & decisions	READY
Execution	TradeLocker REST API	Demo trade placement	BUILD
Chart Signals	TradingView Webhooks + Pine Script	Setup detection → MCP alerts	BUILD
News Feed	ForexFactory + NewsAPI	Fundamental event filtering	BUILD

Storage	PostgreSQL + Google Drive MCP	Trade journal & tabular records	READY (Drive connected)
Notifications	Telegram Bot API	Real-time trade alerts to phone	BUILD
Graphs	Plotly Python	Equity curve, win-rate charts	BUILD

📄

AGENT-01 • NEWS & FUNDAMENTALS

NEWS SENTINEL

Monitors all economic events and live news 24/5. Blocks trades during high-impact windows.

- › Calls mcp-forexfactory.get_events_today()
- › Scores events: HIGH / MEDIUM / LOW impact
- › Blocks USD pairs 30min before/after NFP, CPI, FOMC
- › Calls mcp-newsapi for breaking macro news
- › Publishes NEWS_SAFE or NEWS_BLOCK signal
- › Runs every 5 minutes during session hours

MCP: ForexFactory

MCP: NewsAPI

Every 5min

📄

AGENT-02 • MARKET SCANNER

SIGNAL HUNTER

Scans all 11 instruments for high-probability setups. Scores each signal before passing forward.

- › Receives TradingView webhook alerts via MCP
- › Detects: Order Blocks, FVGs, BOS, CHoCH, VWAP
- › Confirms session: London open or NY open only
- › Scores setup quality 1–10 (spread, momentum, structure)
- › Filters spread below threshold before scoring
- › Only passes setups scoring 7.5+ to Agent-03

MCP: TradingView

MCP: TradeLocker

On Alert

📄

AGENT-03 • STRATEGY PICKER

STRATEGY ORACLE

Matches confirmed setups to the best strategy from KB. Calculates precise entry, SL, TP.

- › Loads strategy KB from mcp-propfirm-kb
- › Matches instrument + session + pattern → best strategy
- › Retrieves historical win rate for that strategy
- › Calculates entry, SL, TP based on strategy rules
- › Sets R:R ratio (minimum 1:2, prefer 1:3)
- › Rejects trade if expected win rate below 65%

MCP: Strategy KB

Claude API

On Signal

⚖️

AGENT-04 • RISK GUARD

RISK ENFORCER

Final checkpoint before any trade. Runs 8 prop firm rule checks. One failure = trade blocked.

- › Calls mcp-propfirm-kb.get_firm_rules(firm)
- › Checks: daily loss not exceeded (e.g. 5% limit)
- › Checks: total drawdown not breached (e.g. 10%)
- › Checks: news window not active (Agent-01 output)
- › Checks: position size ≤ 1% account risk
- › Checks: consistency rule (no single day >35%)
- › Checks: hold time will exceed 60s (FundingPips)
- › Returns APPROVED or BLOCKED with reason

mcp-propfirm-kb

→ Local JSON / PostgreSQL — Prop Firm Rules Database

get_firm_rules(firm_name) → FirmRules object

check_drawdown_ok(firm, current_dd, type) → bool + remaining%

is_trade_allowed(firm, params) → APPROVED | BLOCKED + reason

get_daily_remaining(firm, account_id) → float

check_consistency(firm, day_profit, total) → bool

mcp-forexfactory

→ ForexFactory.com calendar scraper + NewsAPI.org

get_events_today() → List[Event{time,currency,impact}]

is_news_window(currency, buffer_min=30) → bool

get_next_high_impact(currency) → Event | None

get_live_news(keywords) → List[Article]

score_sentiment(currency) → BULLISH | BEARISH | NEUTRAL

mcp-tradelocker

→ TradeLocker REST API — DEMO accounts only

place_order(symbol, dir, size, sl, tp) → OrderResult

get_open_positions(account_id) → List[Position]

close_position(order_id, partial_size?) → CloseResult

modify_sl_tp(order_id, new_sl, new_tp) → bool

get_account_balance(account_id) → BalanceSummary

get_daily_pnl(account_id) → float

mcp-tradingview

→ TradingView Webhook receiver + Pine Script alerts

subscribe_alerts(symbols: List[str]) → WebhookEndpoint

get_latest_alert(symbol) → Alert{strategy,signal,score}

check_ema_cross(symbol, tf, fast, slow) → CROSS_UP | CROSS_DOWN | NONE

detect_order_block(symbol, tf) → List[OrderBlock]

get_vwap(symbol) → float

mcp-journal

→ PostgreSQL (local) + Google Drive MCP sync

log_trade(trade: TradeRecord) → trade_id

update_trade_result(trade_id, result, pnl) → bool

get_strategy_stats(strategy_id, days=30) → Stats

export_to_sheet(sheet_id, date_range) → bool

generate_equity_graph(account_id) → image_path

mcp-telegram

→ Telegram Bot API — alerts direct to your phone

send_trade_opened(trade: TradeRecord) → bool

send_trade_closed(trade, result, pnl) → bool

send_daily_summary(summary: DailySummary) → bool

send_news_block(event, currency) → bool

send_graph(image_path, caption) → bool

TRADE EXECUTION PIPELINE

STEP-BY-STEP DECISION FLOW

REAL TRADE EXAMPLE — EURUSD 5MIN

01

ORCHESTRATOR — SESSION CHECK

Is it London open or NY open?

08:00–12:00 GMT (London) or 13:30–17:00 GMT (NY).
Outside = system sleeps.

→ **SESSION_ACTIVE** or **SLEEP**

02

AGENT-01 — NEWS SENTINEL

Pull calendar. Any red events in next 30min?

Calls `mcp-forexfactory.is_news_window()` for all
instrument currencies.

→ **NEWS_SAFE** or **NEWS_BLOCK(currency, event, time)**

03

AGENT-02 — SIGNAL HUNTER

Scan instruments for high-score setups

TradingView alerts received. Setup scored 1–10. Only
passes score ≥ 7.5 with clean spread.

→ **Setup{symbol, tf, pattern, score, entry_zone}**

04

AGENT-03 — STRATEGY ORACLE

Match setup → best strategy → calculate
Entry/SL/TP

EUR/USD + Order Block + London = ICT OB+FVG (S-01).
Calculates precise levels for 1:2 or 1:3 R:R.

→ **Trade{symbol, dir, entry, sl, tp, strategy_id, rr}**

05

AGENT-04 — RISK ENFORCER

Run all 8 prop firm rule checks

Checks daily loss, total drawdown, position size, news
window, consistency rule, hold time. ALL must pass.

→ **APPROVED** or **BLOCKED(reason)**

06

AGENT-05 — EXECUTOR

Place order on TradeLocker DEMO

`mcp-tradelocker.place_order()`. Monitors position. Partial
close at 1:1. SL to breakeven. Waits for TP/SL.

→ **OrderResult{id, filled_price, status}**

07

AGENT-06 — RECORDER

Log full record to journal + Google Drive

Saves all fields to PostgreSQL. Syncs to Google Sheet.
Updates daily drawdown tracker per firm.

→ **trade_id saved, sheet updated**

```
# 08:14 GMT — London Session Active
orchestrator.check_session() → ACTIVE

news_agent.check("EUR", "USD")
→ No red events next 60min → NEWS_SAFE

scanner.get_alert("EURUSD", "5m")
→ Order Block at 1.0892, FVG confirmed
→ Score: 8.6/10 ✓ Passes threshold

strategy_picker.match(
    instrument="EURUSD",
    pattern="ORDER_BLOCK+FVG",
    session="LONDON"
) → S-01 ICT OB+FVG selected
→ Entry: 1.0892 | SL: 1.0878 | TP: 1.0920
→ R:R = 1:2 ✓

risk_guard.validate(
    firm="FundedNext",
    daily_used=1.5, limit=5% ✓
    total_dd=3.2, limit=10% ✓
    news_ok=True, ✓
    risk_pct=0.8 limit=1% ✓
) → APPROVED

executor.place_order(
    symbol="EURUSD", dir="BUY",
    sl=1.0878, tp=1.0920
) → Order #T-001 filled at 1.0893

# 08:31 GMT — TP Hit
executor.close("T-001")
→ Closed 1.0920 → WIN +$84 ✓

recorder.log_trade(T-001) → Saved ✓
```

BLOCKED TRADE EXAMPLE

```
# 13:25 GMT — NFP in 5 minutes
news_agent.check("USD")
→ NFP release in 5 minutes!
→ Impact: HIGH on all USD pairs
→ NEWS_BLOCK(USD, 30min window)

risk_guard.validate(...)
→ BLOCKED — News window active
→ Reason: NFP in 5min, USD blocked
→ Resume time: 14:00 GMT
```

Analyze today. Update model. Send forecast.

Reads today's journal. Calculates performance per strategy. Sends Telegram daily brief + tomorrow forecast.

→ Telegram daily brief sent

```
telegram.send_alert(  
    " Trade blocked: NFP in 5min",  
    "USD pairs paused until 14:00 GMT"  
)
```

FundedNext – Detailed Rules

PHASE 1: 8% profit | 5% daily DD | 10% max DD
PHASE 2: 5% profit | 5% daily | 10% max
FUNDED: 5% daily | 10% max | Consistency: no single day >15% of total profit
EA/Bot: FULLY ALLOWED — MT4, MT5, TradeLocker
News trading: ALLOWED | Weekend hold: ALLOWED
Min hold time: NONE | Payout: 24 hours guaranteed

E8 Markets – Detailed Rules

E8 ONE (1-step): 6% profit | Max drawdown 14%
CLASSIC (2-step): 8%/4% profit | Drawdown flexible
EA/Bot: FULLY ALLOWED on MT5, cTrader
Accounts up to \$500,000 | Confirmed algo-friendly
News trading: ALLOWED | Scalping: ALLOWED
Payout: 1–3 business days | Split: 80–100%

The5ers – Detailed Rules

BOOTCAMP: 5% profit | Low risk / flexible drawdown
HYPER GROWTH: 10% profit | 5% daily | 8% max
EA/Bot: FULLY ALLOWED
Weekend holding: ALLOWED | News trading: ALLOWED
Scaling: up to \$4,000,000 | Platforms: MT5
Payout: 14 days | Split: 50–100% scales up

FXIFY – Detailed Rules

PHASE 1: 8% profit | 5% daily | 10% max
PHASE 2: 5% profit | 5% daily | 10% max
EA/Bot: FULLY ALLOWED — zero restrictions
No consistency rule — major advantage for scalpers
News trading: ALLOWED | Scalping: ALLOWED
Payout: On-demand | Split: up to 100%

FundingPips – Detailed Rules

1-STEP: 10% profit | 5% daily | Static drawdown
2-STEP: 8%/5% profit | 5% daily | 10% max
EA/Bot: PARTIAL — SL/TP management only, NO full auto
Min hold time on FUNDED: 60 seconds (ENFORCE THIS)
Toxicity: avoid sub-60s trades, avoid HFT patterns
Consistency on-demand payout: no single day >35% of

⚠ UNIVERSALLY BANNED – ALL FIRMS

- HFT / Latency arbitrage — instant ban
- Tick scalping (sub-second execution)
- Grid / Martingale strategies
- Coordinated copy networks (multi-account)
- Opposite account / hedge arbitrage
- Server spamming / price gap trading
- Instant open/close (0-second hold)

total

News on funded: avoid 5min before/after red events

✂ AGENT-04 CHECK ORDER – Every Trade Must Pass ALL 8

1. Session active?

London / NY only

2. News window clear?

From Agent-01

3. Daily loss < limit?

Per firm (5%)

4. Total DD < max?

Per firm (10%)

5. Position size $\leq$ 1%?

Account risk

6. Consistency OK?

No >35% single day

7. Hold time >60s?

FundingPips rule

8. Win rate $\geq$ 65%?

From journal stats

ALL 8 PASS → APPROVED | ANY SINGLE FAIL → BLOCKED (with reason logged)

▣ BEST STRATEGY TODAY

S-01 ICT OB+FVG: 3/3 wins (100%)

S-05 London Breakout: 2/3 wins (67%)

✂ TOMORROW FORECAST (Agent-07)

Best window: London open 08:00 GMT

Top setup: EURUSD 5min – S-01 ICT OB

Watch: USD CPI at 12:30 GMT 

PHASE 1 – FOUNDATION (Week 1-2)

- 1

Build mcp-propfirm-kb

JSON database of all 6 prop firm rules. Agent-04 loads from here. Test all validation checks.
- 2

Build mcp-forexfactory

Scrape ForexFactory calendar. Build news impact scorer. Test NEWS_BLOCK with 30min windows.
- 3

Setup PostgreSQL + Google Drive sync

Create trade journal schema. Connect Google Drive MCP. Test log_trade() and export_to_sheet().
- 4

Build Orchestrator (LangGraph)

Create state graph. Session timer. Agent routing. Circuit breaker. Run without live execution first.

PHASE 2 – EXECUTION (Week 3-4)

- 5

Build mcp-tradelocker

Connect TradeLocker REST API. DEMO accounts only. Test place_order, get_positions, close_position.
- 6

Build mcp-tradingview

Set up webhook receiver. Write Pine Script alerts for S-01 to S-05. Test signal → Agent-02 flow.
- 7

Wire all 8 agents together

Connect full pipeline. Run on paper for 1 week. Log every decision even if no trade placed.
- 8

Build mcp-telegram + Forecaster

Daily briefs. Equity graphs. Agent-07 win-rate analysis. End-of-session forecasts.

PHASE 3 – DEMO LIVE TESTING (Month 2)

- 9

Run full system on DEMO – 4 weeks

All 6 prop firm accounts simultaneously on demo. Record everything. Target: 65%+ win rate.
- 10

Backtest & optimize strategies

Review journal. Remove strategies below 62% win rate. Identify best instrument per session.
- 11

Validate all prop firm rule enforcement

Check Agent-04 correctly enforces all 6 firms. Simulate full P1→P2 challenge progression.

PHASE 4 – LIVE CHALLENGES (Month 3+)

- 12

Start with cheapest prop firm challenge

FundedNext (\$32.99) or FXIFY (\$39). System already knows the rules. No behavior change from DEMO.
- 13

Scale to multiple firms after passing

Once P1 passed: add E8, FTMO, The5ers. Agent-04 manages each firm's separate account state.
- 14

Continuous improvement loop

Agent-07 keeps optimizing. New strategies added to KB. Win rates tracked and auto-adjusted.

▮ PRIORITIZED BUILD ORDER – START HERE

ORDER	BUILD THIS	WHY FIRST	EST. TIME	CLAUDE CAN CODE IT?
1st	mcp-propfirm-kb (JSON rules)	Risk Guard needs this before any trade can be evaluated	1 day	YES – say the word
2nd	mcp-forexfactory (news filter)	Without news filtering, USD trades are dangerous	2 days	YES – say the word
3rd	PostgreSQL journal schema	Without records, no learning or tracking possible	1 day	YES – say the word
4th	mcp-tradelocker (DEMO)	Core execution on safe demo — test order placement	3 days	YES – say the word
5th	mcp-tradingview (webhook)	Signal source. Needs Pine Script + webhook server	3 days	YES – say the word

ORDER	BUILD THIS	WHY FIRST	EST. TIME	CLAUDE CAN CODE IT?
6th	LangGraph Orchestrator	Ties everything together. Build after all MCPs confirmed	4 days	YES – say the word
